

PI NETWORK DEFI

PREFACE

DeFi, namely decentralized finance, is one of the scenarios most consistent with the characteristics of blockchain (decentralized, open, anonymous, trusted, value transfer, etc.) among the current blockchain landing applications.

There are only about 1,000 mainstream DeFi projects. The BSC blockchain system enables large-scale commercial applications, almost zero-cost transactions and second-level on-chain verification.

At present, games and DEX developed on BSC have achieved success, and the user experience has been greatly improved.

However, in the field of DeFi, BSC projects are still not active, one of the main reasons is that compared with the BSC that has been running for many years, asset types and liquidity on the BSC main network are relatively scarce, while DeFi in essence is mainly mortgage, replacement and circulation among assets. Therefore, how to solve the liquidity and diversity of assets on BSC is the key to the success of DeFi on BSC.

The emergence of PI NETWORK DEFI is to solve this problem currently existing in BSC. Meanwhile, the high performance of BSCIO is also the basis for PI NETWORK DEFI to finally get a good experience

Project Development Background

What is Pi Network DeFi?

Pi Network DeFi is made possible by a dedicated team of community members and engineers.

Pi Network DeFi is a BSC blockchain platform designed to provide passive forms of revenue, In addition to the automatic dividend USDT bonus embedded in the contract

Pi Network DeFi will also use funds generated by the acquired company to conduct manual buybacks and burn Pi Network DeFi,

resulting in a further tightening of supply and helping to further stabilize prices.

What is DEFI?

Pi Network DeFi can break down the boundaries of financial markets between countries. For example, on Pi Network DeFi, you can lend money to anyone, anywhere in the world, no matter who.

Breaking zero eliminates the huge yield gap in global financial markets and greatly reduces the friction of capital flows.

You can also manage your money and investments

In addition to the automatic dividend USDT bonus embedded in the contract

Pi Network DeFi will also use funds generated by the acquired company to conduct manual buybacks and burn Pi Network DeFi, resulting in a further tightening of supply and helping to further stabilize prices.

ESTABLISHING TRUST

The community plays a very important role in the success of this project and its mission, therefore, to build trust and the confidence of the holder, the team token is granted to develop the eco-app build

Allocation to booking

We will use 20% of the token for pre-sale, 10% for pre-sale and the rest for final distribution into the black hole for destruction

ROADMAP

PHASE 1:

- √ -Token creation
- √ -Website development
- √ -Know Your Customer
- √ -Release of white Paper

PHASE 2:

- Marketing
- Presale launch
- Pancakeswap launch
- dApp integration
- Pi Network DeFi token swap
- CMC listing
- Coingecko listing

PHASE 3:

- NFT market place
- Voting dApp integration
- 250M Marketcap
- Non-profitable Charity donation
- Manual token buy back and burn

PHASE 4:

- CEX listing
 - Staking
 - Marketing
 - 500M Marketcap
 - Hodlers meet up party to celebrate the success
 - Farming as a Service(FAAS) integration
 - MORE TO ADD SOON
-

TOKENOMICS

TAX: 6%

Trigger bonus, hold 1 million: 3% USDT

Repatriation pool lock-in: 1%

Marketing: 1%

Burning destruction: 1%

DISTRIBUTION

Total circulation is 10 billion

Private 20%

Open to booking a 20%

Added liquidity 40%

**10% ready for pre-sale (unallocated black hole
destruction)**

**5% of the project team holds the development of
ecological application construction**

3% Docking market

1% owned by the technical team

1% bonus for early pioneers.
